

I worked with Josef Namin from the start of CWH's Cerner EMR project. He was with us for the decisions, the build, the implementation, the fixes, and the problem solving. He is hard working, flexible, and completely trustworthy. He was always very quick to respond and would immediately investigate to fix problems, make changes or just educate us to the functionality of Cerner. He is extremely knowledgeable about this product and the use of the computer and is a very good teacher. I found him polite and very easy to work with.
